EXPERIENCE

Forward Earth GmbH - Platform Engineer (Contractor - Advisory & Delivery)

Apr 2026 - Present | Remote

- Designed and validated a Kubernetes-based sandbox for testing serverless (AWS Lambda) workloads locally, nesting it inside its own container runtime to work around a known tooling limitation; proved it with live event-bus and object-storage integration, then scaled it to a full serverless microservice.
- Reverse-engineered and documented a large serverless architecture to support ongoing platform evolution, surfacing consolidation opportunities that informed roadmap planning.
- Scoped preview/staging environment adapters for complex asynchronous data-processing flows, tracing production behavior across several codebases to fit existing orchestration logic.
- Delivered a local-development integration connecting a development environment to a remote backing service via an opt-in configuration flag, after evaluating multiple integration approaches.

BunnysHELL - Solutions Architect / DevOps Engineer (Power User)

Sep 2021 - Feb 2026 | Remote (Mauritius / UK)

- Designed cloud-native solution architectures for customer and internal use cases, converting business goals into implementable and supportable technical designs.
- Standardized platform delivery with Terraform modules, Helm charts, Kubernetes manifests, and Docker-based repeatable environments, reducing environment setup time by an estimated 10-20%.
- Implemented and improved CI/CD workflows across GitHub Actions, GitLab CI, CircleCI, and Argo CD to reduce manual release effort by an estimated 10-20%.
- Owned production operations across AWS, Azure, GCP, and DigitalOcean, improving operational consistency and reducing change-related incidents by an estimated 8-15% through standardized runbooks.
- Improved reliability maturity with proactive monitoring, incident response, post-incident reporting, and operational documentation; contributed to lower incident recurrence and faster recovery (estimated 10-15% MTTR improvement).
- Built delivery and operations automation scripts and internal guides, reducing onboarding/enablement time for engineers by an estimated 10-15%.

edirect - DevOps Engineer (Bespoke Project Lead)

Apr 2020 - Aug 2021 | Liverpool, UK

- Led an infrastructure cost optimization initiative while preserving reliability and service continuity, delivering measurable cloud spend reductions (estimated 8-15%).
- Migrated 600+ websites across providers using phased cutover planning, maintaining high service continuity and minimizing downtime during transitions.
- Implemented standardized migration runbooks and validation checkpoints, reducing cutover-related incidents by an estimated 10-15% and improving delivery predictability across high-volume releases.

A4D World - Full Stack Developer / DevOps (Freelance)

Jan 2019 - May 2020

- Delivered end-to-end web solutions from design and implementation through deployment and production support across backend and frontend stacks.
- Built and maintained backend services using Laravel and Node.js, and frontend applications using React, Vue, and vanilla JavaScript.
- Supported releases and production stability across monolithic and containerized environments, improving deployment consistency and issue resolution.

Above The Fold - Backend Developer

Mar 2017 - Jan 2019 | Beirut, Lebanon

- Developed backend services, APIs, and integrations using PHP (Laravel/Symfony) and Node.js.
- Managed Linux infrastructure on Ubuntu VMs, including deployment support, monitoring, and production operations.
- Contributed to backend architecture and technical decision-making to improve maintainability and long-term scalability.

SELECTED OUTCOMES

- Owned production-grade platform operations across four major cloud providers, sustaining reliability while scaling delivery.
- Built reusable infrastructure and delivery patterns that reduced onboarding/setup effort by an estimated 10-15% and improved developer experience.
- Combined architecture leadership with operational execution to improve release predictability and lower operational risk across customer-facing and internal initiatives.

SUMMARY

Platform and infrastructure leader with hands-on delivery across AWS, Azure, GCP, and DigitalOcean. Designs and operates reliable cloud platforms that improve developer productivity, reduce operational toil, and increase delivery speed. Blends architecture, platform engineering, DevOps leadership, and customer-facing solution design with a strong focus on IaC, CI/CD, Kubernetes, SRE practices, and operational governance.

CERTIFICATIONS

- Certified Kubernetes Administrator (CKA)
- NLP Practitioner Certification
- Ansible Mastery Certification

SKILLS

Cloud Platforms

AWS, Azure, GCP, DigitalOcean, hybrid cloud patterns

Containers and Kubernetes

Kubernetes (CKA), Helm, Argo CD, Docker, Kubernetes manifests

Infrastructure as Code

Terraform, reusable modules, environment standardization, policy-aligned provisioning

CI/CD and Release Engineering

GitHub Actions, GitLab CI, CircleCI, progressive delivery patterns, GitOps

Observability and Reliability (SRE)

SLO thinking, incident response, postmortems, runbooks, proactive monitoring

Security and Governance

guardrails, least-privilege mindset, security baked into delivery workflows

Languages and Scripting

Bash, Go, Python, PHP, Node.js, Java
