

AMIN AL ALI AL DARWISH

Head of Platform | Platform Engineering Lead | Senior Platform Engineer

Vacoas, Mauritius | +230 5735 8608 | aminaliali8@gmail.com | [linkedin.com/in/aminaliali](https://www.linkedin.com/in/aminaliali)
Updated September 2026

EXPERIENCE

Forward Earth GmbH - Platform Engineer (Contractor - Advisory & Delivery)

Apr 2026 - Present | Remote

- Designed and validated a Kubernetes-based sandbox for running serverless (AWS Lambda) workloads on developer machines, nesting it inside its own container runtime to work around a known tooling limitation; proved it with live event-bus and object-storage integration, then scaled it to a full serverless microservice.
- Reverse-engineered and documented a large serverless architecture to support ongoing platform evolution, surfacing consolidation opportunities that informed roadmap planning.
- Scoped preview/staging environment adapters for complex asynchronous data-processing flows, tracing production behavior across several codebases to fit existing orchestration logic.
- Delivered a self-service local-development integration connecting a development environment to a remote backing service via an opt-in configuration flag, after evaluating multiple integration approaches.

BunnysHELL - Solutions Architect / DevOps Engineer (Power User)

Sep 2021 - Feb 2026 | Remote (Mauritius / UK)

- Designed and implemented reusable platform patterns for customer and internal teams, improving deployment consistency and reducing release variance across environments.
- Standardized infrastructure with Terraform modules, Helm charts, Kubernetes manifests, and Docker baselines, reducing environment setup variance and cutting provisioning effort by an estimated 10-20%.
- Improved delivery flow using GitHub Actions, GitLab CI, CircleCI, and Argo CD; reduced manual release toil by an estimated 10-20%.
- Built platform operations discipline across multi-cloud environments through monitoring, incident handling, and documented runbooks, improving incident response readiness and recovery speed (estimated 10-15% MTTR improvement).
- Authored internal tutorials and operational guides to improve platform adoption and shorten onboarding by an estimated 10-15%.

edirect - DevOps Engineer (Bespoke Project Lead)

Apr 2020 - Aug 2021 | Liverpool, UK

- Led large-scale migration execution (600+ websites) with controlled cutovers, maintaining high availability and minimizing downtime across waves.
- Improved cloud cost posture while maintaining reliability through practical infrastructure optimizations (estimated 8-15% savings).
- Implemented reusable migration runbooks and operational guardrails, reducing cutover-related incidents by an estimated 10-15% while improving platform scalability and change consistency.

A4D World - Full Stack Developer / DevOps (Freelance)

Jan 2019 - May 2020

- Delivered end-to-end web solutions from design and implementation through deployment and production support across backend and frontend stacks.
- Built and maintained backend services using Laravel and Node.js, and frontend applications using React, Vue, and vanilla JavaScript.
- Supported releases and production stability across monolithic and containerized environments, improving deployment consistency and issue resolution.

Above The Fold - Backend Developer

Mar 2017 - Jan 2019 | Beirut, Lebanon

- Developed backend services, APIs, and integrations using PHP (Laravel/Symfony) and Node.js.
- Managed Linux infrastructure on Ubuntu VMs, including deployment support, monitoring, and production operations.
- Contributed to backend architecture and technical decision-making to improve maintainability and long-term scalability.

SELECTED OUTCOMES

- Delivered multi-cloud platform standards that improved reliability and increased engineering consistency across teams.
- Enabled faster software shipping through reusable platform modules and workflow standardization, reducing delivery friction by an estimated 10-15%.
- Combined architecture intent with operational ownership to keep platforms scalable, operable, and resilient under change.

SUMMARY

Platform engineering leader focused on building internal developer platforms (IDP), standardizing cloud environments, and improving software delivery reliability at scale. Hands-on across AWS, Azure, GCP, and DigitalOcean with strong execution in Kubernetes, Terraform, GitOps, CI/CD, and SRE operations. Delivers paved-road platform capabilities, reusable modules, and governance guardrails that reduce engineering toil and accelerate delivery.

CERTIFICATIONS

- Certified Kubernetes Administrator (CKA)
- NLP Practitioner Certification
- Ansible Mastery Certification

SKILLS

Internal Platform Engineering

IDP thinking, self-service patterns, environment templates, standardized delivery workflows

Cloud and Infrastructure

AWS, Azure, GCP, DigitalOcean, cloud operating models

Platform Tooling

Kubernetes, Helm, Argo CD, Docker, Terraform, GitOps

Delivery and Reliability

CI/CD, observability, SLO-aligned operations, incident management, postmortems, runbooks

Governance

guardrails, policy-aware implementations, secure-by-default delivery patterns
